Art Unit: 3729

Office's Reasons for an Allowance

COMES NOW the Patent Office and opines at least a reason for the Allowance of this Application, to wit: that the Prior Art neither teaches nor reasonably suggest the structural elements which make a parts mounting apparatus which is used to mount a first part to a second part which comprise a suction head having a head reference mark which can be observed from above, for suctioning the first part at a lower end portion of the suction head, a stage having a reference mark which can be observed from below, for holding a second part at an upper end portion of the stage, a driving mechanism for relatively moving the suction head and the stage in the X, Y, and directions, a first optical system for taking images of the second part held by the stage, and the reference mark, from above the suction head, a second optical system, disposed as to generally face the first optical system with the optical axis thereof aligned with the optical axis of the first optical system, for taking images of the first suctioned to the suction head, and the stage reference mark, from below the stage, a computation device for calculating the relative position between the first part and the suction head, and the relative position between the second part and the stage, based upon image information from the first and second optical systems and a control device for performing correction for the suction head and the stage so that the positions of the first part and the second part satisfy a predetermined relation based upon the positional information and the relative positional information from the first and second optical systems detecting the head reference mark, and stage reference mark with the suction head and stage being positioned at the mounting position.
